

... **Innovative**
and **Proven**

In addition to the continuous new product development, Intercontec also consistently monitors the established components of the extensive product range to ensure that they comply with the high quality standards.

You will therefore always acquire the optimal connector for any of your applications.

SPEEDEC

**The sensational
Fast-Lock-System
by Intercontec**

- **SpeedTEC, the sensational Fast-Lock-System**

Swift, safe, compatible:

Our new fast lock system SpeedTEC helps you to minimise connecting times. No matter whether you want to install big or small facilities or work on complex wirings in narrow control cabinets - the quick and safe handling will always be a benefit to the job at hand! No more tedious turning round and round and regripping -all you need now is a slight turn. The connector can be firmly secured even in the smallest of spaces. The new SpeedTEC is compatible with standard connecting nuts. This way, you can easily connect new components equipped with SpeedTEC sockets and couplings to your existing connectors.

The SpeedTEC fast lock system is available for the sizes M17, M23 and M40.

- **New, rotatable angled connectors keep running smoothly - even when they are getting hot**

The new angled plug connectors are even more robust than before!

After adjusting to the optimal output direction, the turning mechanism will remain safely locked in position even up to temperatures of 130°C.

- **Our compact M17 Series can go even further**

Great performance in small space: the new 12-pin M17 enables you to use Imm-contacts and therefore tolerates much higher currents, which you would normally have to use a bigger connector for.

The one pin SingleTEC size M17 carries up to 84A. A sixfold codable insulating body provides maximum safety when installing complex facilities.

- **Heavy duty in smallest spaces**

Rotatable angled plug connectors and couplings size M23 provide you with any output direction you need.

Although small in size, they are very sturdy. The perfect choice for smallest spaces!

- **No problem going through walls**

With the new clamp flange you can now easily use assembled standard connectors or couplings as wall bushings.

We can now supply our space-saving cable connections with lamellar shielding in all current sizes.

- **LiMoTEC - the optimal connector for linear motors up to 75A**

We designed this rectangular plug connector specifically to the demands of linear drive. The heavy-duty contacts already used for circular connectors reliably allow even high currents.

All our new Intercontec products open up new possibilities for safely and quickly connecting signal and power cables. Also make sure to ask us about our very sizable standard programme, which boasts unique capacities, as well as our special custom-made solutions.
